STOP CHIMNEY DRAUGHTS

Your chimney works on very simple principles, warm air rises, and cold air sinks. This is great when you have a fire burning, enabling the smoke to escape to the atmosphere.

It's not so great when you don't have a fire burning however. The same principal is still working; your warm room air is escaping up the chimney stack, and cold outside air is coming down the chimney, causing draughts. Installing a Chimsoc will stop the draughts, reduce outside noise entry, and keep your warm room air in.

The Chimsoc is manufactured in five sizes to suit common chimney stack dimensions. Please note that all dimensions shown are chimney dimensions, and not the Chimsoc itself, which will always be slightly larger, to allow it to hold in place. See the reverse side for sizes and prices.

BUY ONLINE AT

Note:- Chimsoc prices may be higher on eBay and Amazon to allow for the higher seller charges associated with selling on those platforms.
